

## SIMPLIFIED APPROACHES

# **SESSION 1: AN OVERVIEW OF SIMPLIFIED APPROACHES FOR THE EARLY DETECTION & TREATMENT OF CHILD WASTING.**

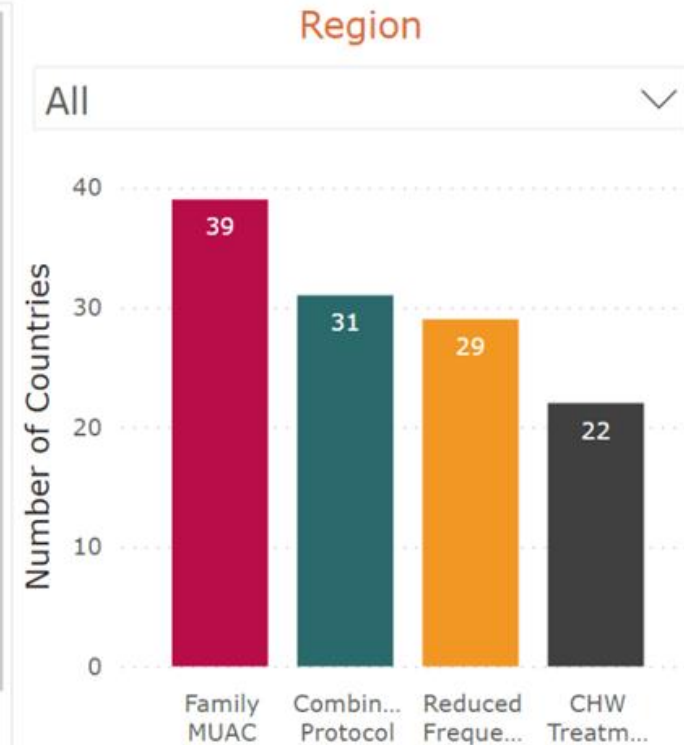

---

13 DECEMBER 2021  
8.00 – 9.30 EST

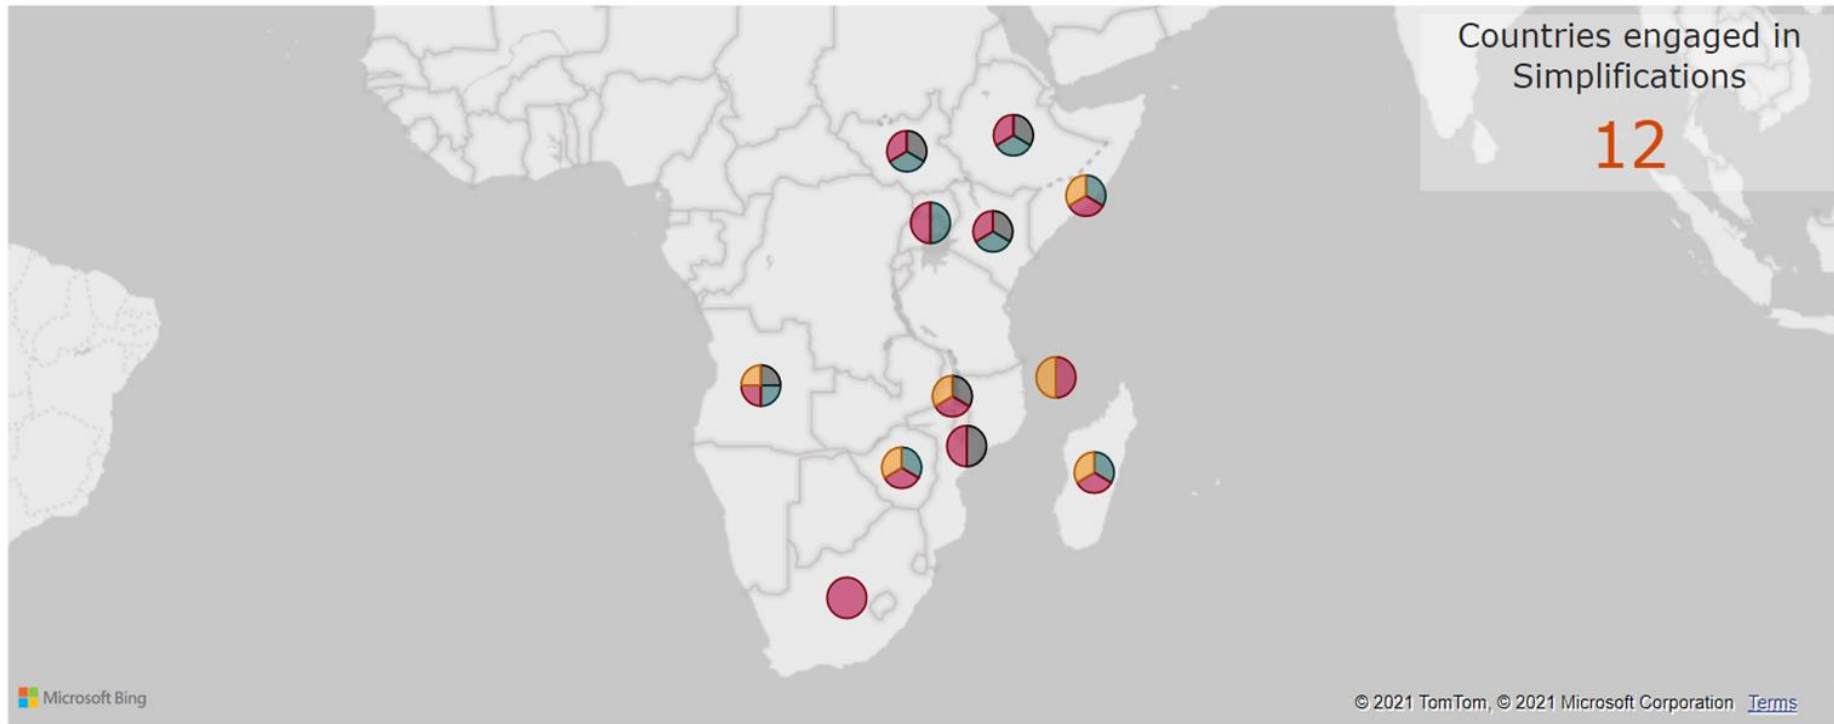

# Overview of Implementation

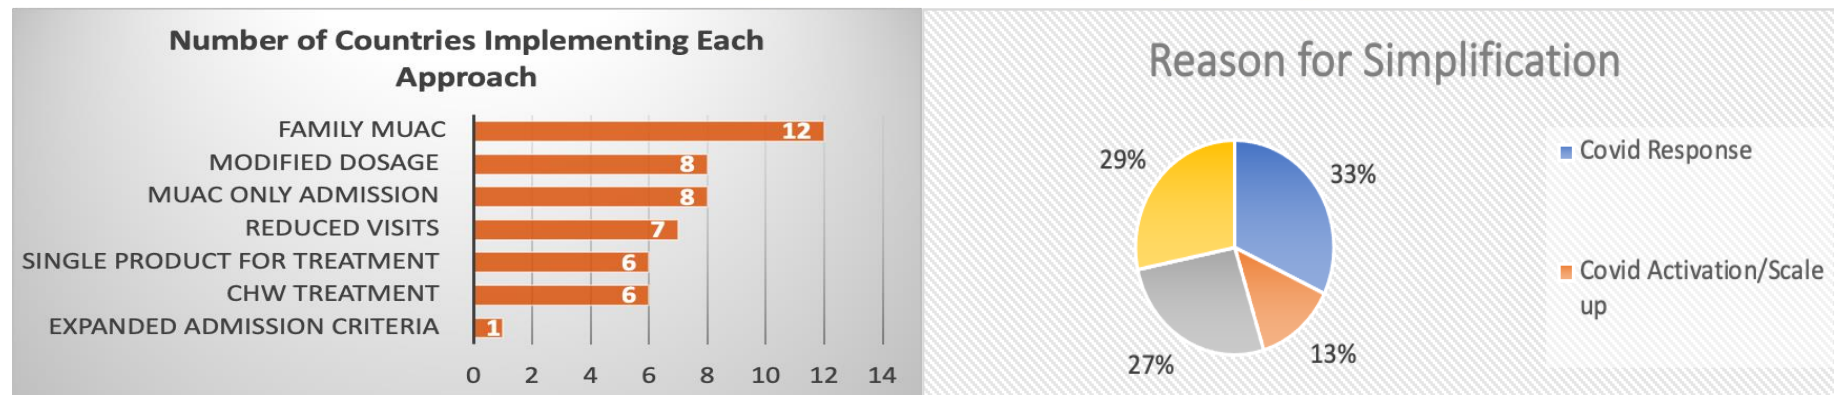

**Simplification** ● *CHW Treatment* ● *Combined Protocol* ● *Family MUAC* ● *Reduced Frequency*

# East and Southern Africa Region Perspectives

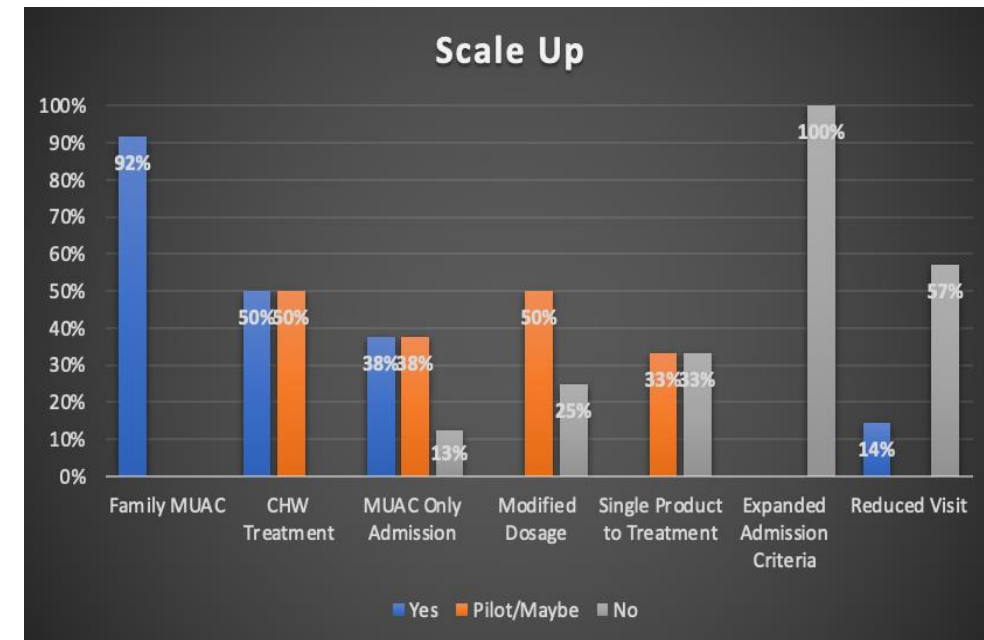

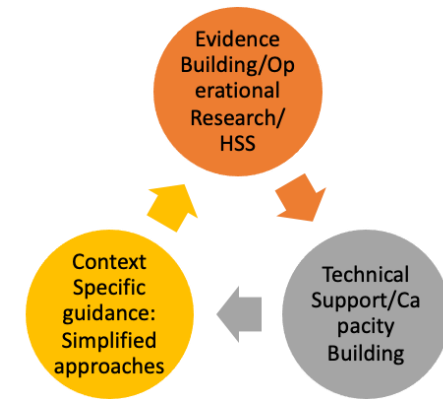

**Simplification** ● *CHW Treatment* ● *Combined Protocol* ● *Family MUAC* ● *Reduced Frequency*

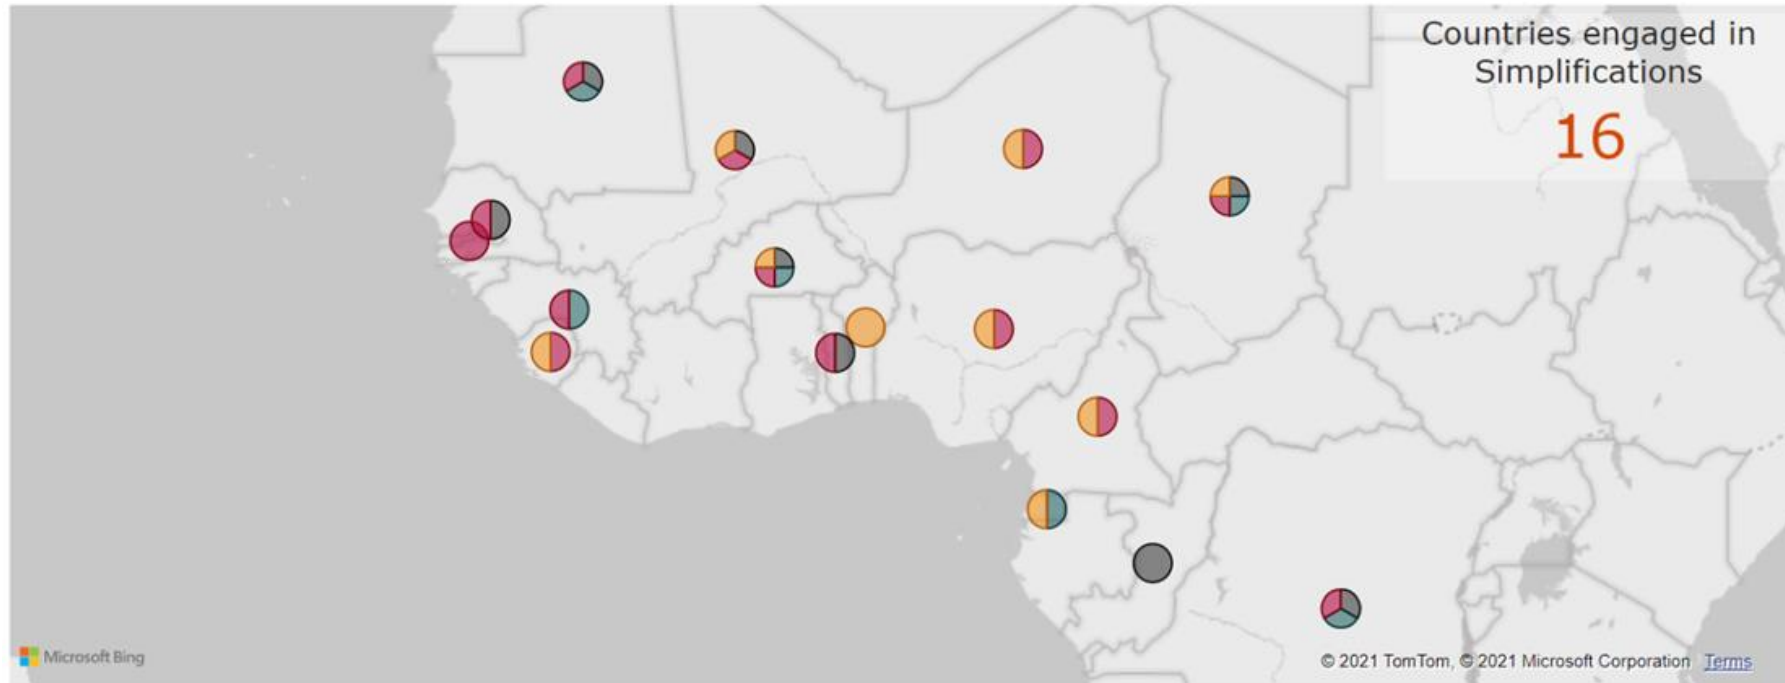

# East and Southern Africa Region Perspectives

- Define simplifications ready for scale up: move from pilot or emergency to health system implementation
- Strengthening gaps identified including:
  - Data collection and documentation, especially within the context of existing health system
  - Supply pipeline support including caseload calculations and costing scenarios
  - Supporting training and capacity development initiatives for simplified approaches in the region
- Continued implementation research on simplified approaches

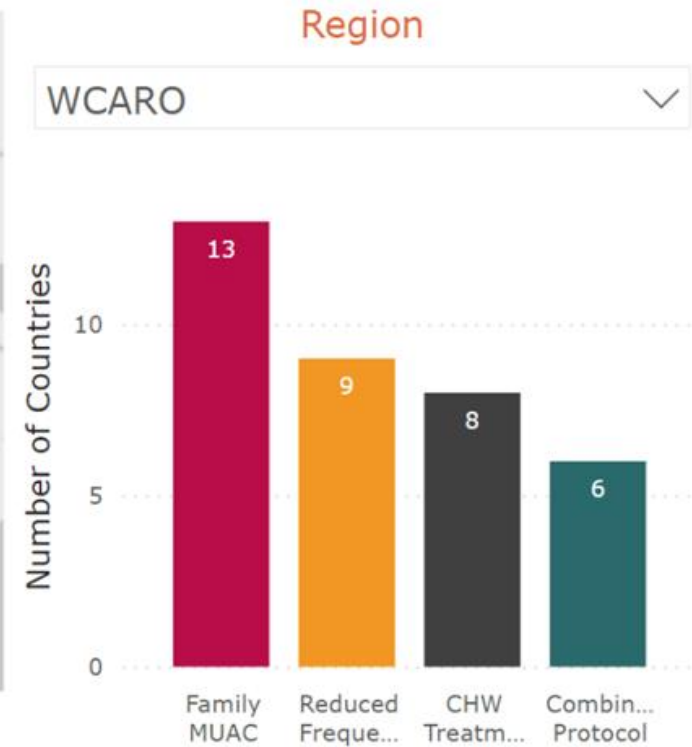

## ESAR TWG Priority Areas of focus

# West and Central Africa Region Perspectives

**Simplification** ● *CHW Treatment* ● *Combined Protocol* ● *Family MUAC* ● *Reduced Frequency*

# West and Central Africa Region Perspectives

## Scaling up simplified approaches - Development of a roadmap

### Different types of scale

#### Horizontal (Geographical)

- **RO**: Expanding the number of countries in the region
- **CO**: Expanding regions in country

#### Vertical (Institutional)

- **RO**: integrate in UNICEF program design, strategies and partnership
- **CO**: integration in UNICEF and National program design, strategies and partnerships – Develop national guidance – Build national capacities

#### Functional (Adding-On)

- CO**: Adding simplifications with time | addition on simplifications with existing program to support the continuum of care prevention-treatment
